Operational Priorities

Evidence-based investigation priorities | Fixed historical period: Jan 2017 – Aug 2018

Segments are screened using order volume, excess late deliveries, Wilson confidence intervals and consistency across periods. Categories indicate where further investigation may be worthwhile; they do not establish the cause of delays.

Late-Delivery Rate: High-Delay vs Other Months

Recommended Operational Investigations

01 — SP → RJ Delivery Route

+596 excess late orders

Investigate carrier allocation, transit time and last-mile delivery performance on this route.

02 — Northeast-Bound Routes

SP → AL: 24.0% late rate

Investigate whether long-distance transit arrangements and delivery promises are associated with elevated late-delivery rates.

03 — Historical Delay Episodes

15.1% late-delivery rate

Investigate operational conditions during November 2017, February 2018 and March 2018, including carrier capacity and promotional demand.

Priorities use historical delivery volume, excess late orders, Wilson confidence intervals and temporal consistency. The 20-order threshold is provisional. Seller findings are secondary screening evidence. States, lanes and sellers overlap and must not be added together. Findings are observational, not causal.
